

2007 Wrangler (JK) Tested

3-24-06 Superlift ORV Park in Hot Springs, AR
Original Content Posted in March Newsletter.

Last November, a group of Jeep engineers from Daimler-Chrysler visited the Park with a herd of new black camo-clad Wranglers. We would have told you sooner, but then... well, you know. Arkansas Crawler's President Billy Mountjoy, along with Superlift Suspension personnel, helped guide the seven or so Wranglers during 5-days of brutal real world testing, complete with rock rash. All involved were genuinely impressed with the new JK's performance. It looks like the Park will be a regular stop for Jeep Engineering. The JK will hit the market some time this Fall.

RE: 2007 WRANGLER (JK) TESTED

I'm very happy with the look of the new Wrangler - I was worried Jeep would do something retarded and make it look ass-backwards or something. Here's to an '08 in my future!

RE: 2007 WRANGLER (JK) TESTED

My main issue is more with the change in the Engine. Going to a V6 instead of a straight six is a concern. Currently I own two TJs with straight six engines. Both are over 100K in miles and run fine. I am concerned that the v6 engine is not as good. What are your thoughts?
